Overview

Build and expand your network with Ubiquiti Networks® UniFi® Switch, part of the UniFi line of products.

The new 8-port models feature Gigabit Ethernet ports in a compact form factor. The switches are fully manageable, delivering robust performance and intelligent switching for your growing networks.
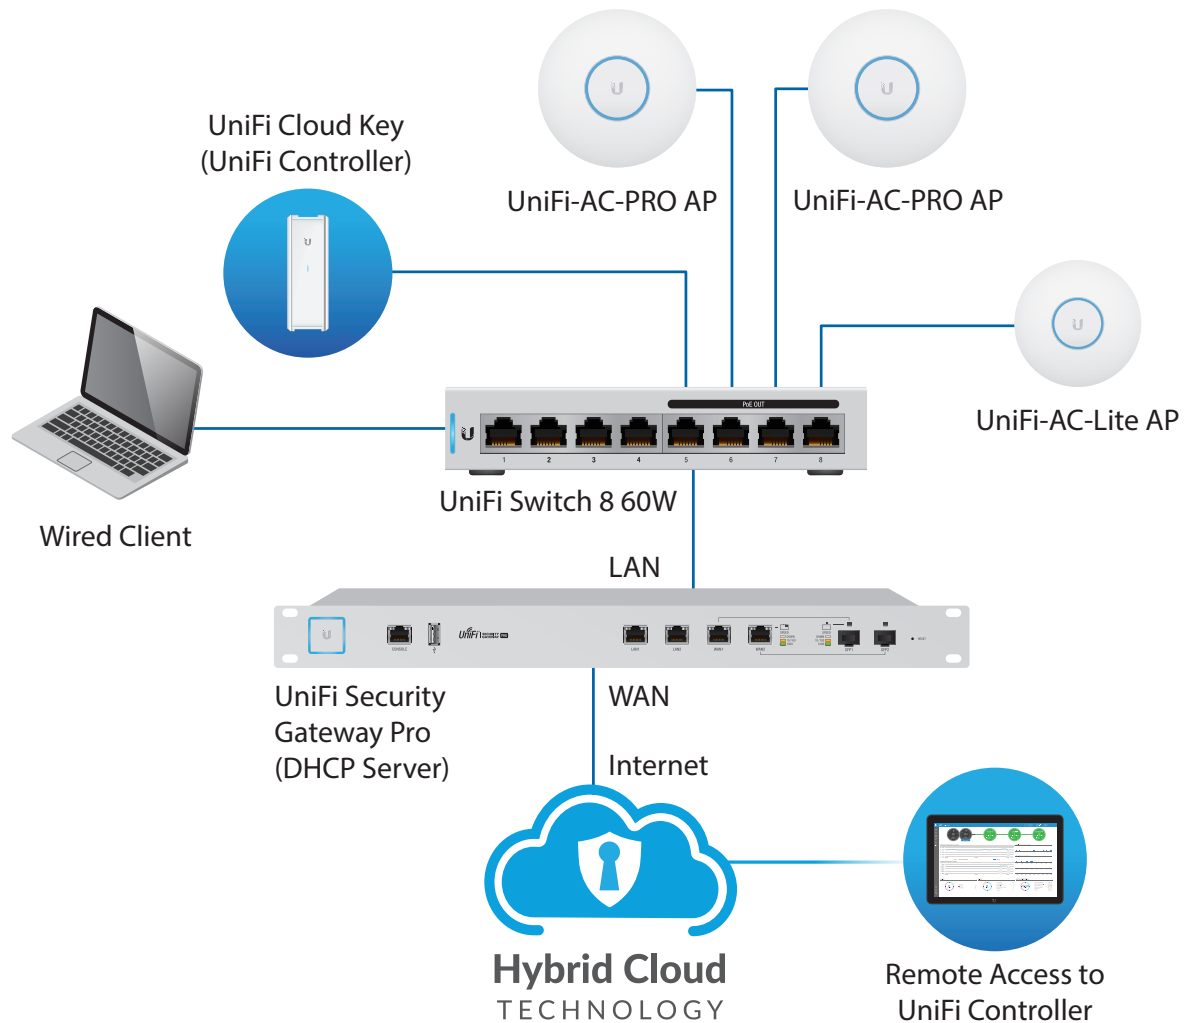

Switching Performance

The UniFi Switch offers the forwarding capacity to simultaneously process traffic on all ports at line rate without any packet loss.

For its total, non-blocking throughput, each supports up to 8 Gbps with a switching capacity of 16 Gbps.

PoE

The US-8-60W model has four auto-sensing PoE ports that can deliver up to 15.4W of power for PoE devices.

The US-8 model has a PoE Passthrough port. It's output voltage and power rely directly on the power input.

UniFi Controller

Designed for convenient management, the UniFi Controller software allows admins to configure and monitor the UniFi Switch and other UniFi devices using a graphical user interface. You can download it from **www.ubnt.com** at no extra charge – there is no separate software, licensing, or support fee.

Multi-Site Management

A single instance of the UniFi Controller running in the cloud can manage multiple UniFi sites within a centralized interface. Each site is logically separated and has its own network monitoring, configuration, maps, statistics, and admin accounts.
Switch Configuration

You can access any managed UniFi Switch through the UniFi Controller to configure a variety of features:

• Operation mode (switching, mirroring, or aggregate) per port
• Network/VLAN configuration
• Jumbo frame and flow control services
• Network settings
• Storm control setting per port
• Spanning tree configuration
• 802.1x control and RADIUS VLAN
• Debug terminal option for command-line interface

Switch Port Status

You can also view status information for each port:

• Connection speed and duplex mode
• TX/RX data rates
• Network/VLAN setting

Device Configuration

The *Devices* screen displays the UniFi devices discovered by the UniFi Controller. You can access each managed device for device details and configuration.

Statistics

The *Switch Statistics* screen displays a graphical overview of all LAN throughput for each port on the selected switch. Under the same pane of glass, it also shows LAN, WLAN, and Internet traffic, including the breakdown of protocols being used (requires a UniFi Security Gateway).
